

REMUS 8 – the new standard for touring bikes

With the technical and optical outstanding, brand new REMUS 8 sport muffler the REMUS R&D crew has set a new standard for touring bikes.

The multi-pass interior design of the innovative muffler offers a big expansion volume to enable an increase of engine power and torque in combination with the well-known, sonorous REMUS sound. Of course the REMUS 8 sound is within all legal limits and the sport muffler is delivered with EEC approval papers. Despite the big volume of the muffler, the slim design enables the easy mounting of standard carrying cases.

The conical muffler with a sleeve length of just 350 mm is available with stainless steel-dull and stainless steel-black sleeve. The inlet cap as well as the interior body is made of stainless steel, the outlet cap is made of high quality carbon. The mounting of the REMUS 8 is done with a bracket, because a clamp will destroy the optical appearance of the octagonal-conical shape of the sleeve.

The brand new REMUS 8 will be available for selected touring bikes from the beginning of the season 2017.

- Sleeve made of stainless steel-dull or stainless steel-black
- Internal body made of stainless steel
- Power and torque increase
